

Free Online Courses!

We hope that when you finish your studies, you continue to develop your knowledge and understanding in your chosen area of study and beyond.

It is unfortunate that your assignment work has ended but the silver lining is that you now have the opportunity to tailor your learning to your interests and future studies. This is what is more commonly known as **continuing professional development (CPD)** and you will add to it throughout your working life.

To help you prepare for further study, we have put together a list of **free(mainly) online courses** which you may find helpful.

Why should I study a course?

You really do get out what you put in!

It probably hasn't gone unnoticed that peers who were particularly successful in the Health and Social Care exams undertook more wider reading and active learning. The same is true of the job market. You may find yourself up against some **serious competition when you go for job interviews**.

Many of the courses we will suggest are **certified** and you will be able to add them to your CV.

The information that you acquire may be useful in **future seminar, discussion or assignment work**.

Finally, you might just enjoy learning something new...

Courses are available from:

completion

Diversity and difference in communication

More about this course

Interpersonal communication in health and social care services is by its nature diverse. As a consequence, achieving good or effective communication whether between service providers and service users, or among those working in a service means taking account of diversity, rather than assuming that every interaction will be the same. This free course, *Diversity and difference in communication*, explores the ways in which difference and diversity impact on the nature of communication in health and social care services.

Infection and immunity

More about this course

In this free course, *Infection and immunity*, you will be introduced to infectious diseases and to the biological agents that invade our bodies and cause them: pathogens. You will also learn about the immune system, the human body's vital defence against pathogens. Along the way you will learn about the scientific method and how it has helped scientists understand pathogens and aid the prevention of infectious disease. But the challenge is ongoing. Pathogens are everywhere and come in all shapes and sizes. As you will see, the fight against infectious disease remains critical for global health.

Cardiovascular Disease (<https://www.futurelearn.com/>)
